PURPOSE OF THE CGEIT ITEM DEVELOPMENT GUIDE

The purpose of the CGEIT Item Development Guide is to assist item writers in their efforts to write new items for the CGEIT exam. This guide is intended to familiarize writers with the item development process and provide tools to help create quality exam questions.

As you read through this Guide, please pay particular attention to the item writing principles. Applying these principles will greatly increase the chances of your items being accepted for the CGEIT exam.

THE CGEIT ITEM WRITING AND REVIEW PROCESS: AN OVERVIEW

ISACA conducts item writing campaigns each year to generate new items for the CGEIT exam bank. You will receive an invitation to the campaign from our online item writing system, along with instructions for how to use the system to create and submit new items for review. Resources and guidance will also be available throughout each campaign to assist you.

Once you have submitted a new item, a member of the ISACA item development team will review the item for adherence to ISACA’s item writing guidelines. ISACA staff reviewers are not subject matter experts; however, they are exam development experts and understand the types of questions that test well or poorly. While the ISACA staff review typically does not focus on the content of the item, they may provide suggestions for alternate wording to enhance the clarity of the text. Items that need revision to meet ISACA’s guidelines are returned to the writer with feedback and can be resubmitted at any time before the campaign’s final deadline.

Once ISACA staff determines that an item is ready to move forward, the item will then be included for review by the CGEIT Exam and Item Development Working Group (EIDWG),

which is a panel of CGEIT subject matter experts from a variety of industries and regions. The Working Group meets a few weeks after the conclusion of the campaign to review the items with a focus on the content being tested. Items accepted by the working group go directly into ISACA's exam banks, and the item writer is paid an honorarium and awarded CPEs for each item accepted. Items that are not accepted by the working group are returned to the writer after the meeting with the applicable feedback.

While initial feedback from ISACA staff takes place on an ongoing basis during the campaign, final results from the EIDWG are typically available the week following the Working Group meeting. This means that once a campaign closes, feedback from the Working Group will not be available for approximately 4-6 weeks, depending on the meeting date.

TRAINING FOR NEW WRITERS

All new item writers are required to complete an online training program before participating in a regular CGEIT campaign. Writers enrolled in a training program are assigned to a member of the ISACA item development team, who will provide detailed feedback on submissions to help writers become familiar with the process and principles behind effective CGEIT item writing. Upon completion of the training program, writers become eligible to participate in our regular CGEIT item writing campaigns.

WRITING QUALITY ITEMS

ISACA and the CGEIT Certification Working Group periodically perform a CGEIT job practice analysis study to determine the tasks and knowledge currently required of IT governance professionals. The results of this analysis serve as the blueprint for the CGEIT exam and the CGEIT review materials. Exam questions must be written to test a candidate's knowledge of established content areas defined by the CGEIT exam content outline (ECO). Each item must be assigned by the writer to a topic and a supporting task from the content outline, which is made available to writers at the beginning of each campaign.

When writing CGEIT items, it is necessary to consider the exam's target audience, which is the minimally competent CGEIT candidate. Items must be developed to test the knowledge of an IT professional with 5 years of IT governance experience including one (1) year experience in Domain 1 influencing overall organizational structure, policy, and processes.

The CGEIT Certification Committee describes a qualifying CGEIT as having the ability to:

- Develop frameworks, policy, and the enterprise plan (does not simply execute them)

- Demonstrate awareness of how IT governance fits within the enterprise
- Align IT with corporate governance
- Integrate solutions
- Understand how an enterprise gains value through the use of IT
- Use IT in governing the business direction
- Report on a model (rather than simply contributing to the model)
- Recognize the concept of business alignment
- Identify critical risk through use of risk management strategies

Item writers must also keep in mind that because the CGEIT exam is administered globally, the content and wording of items must be universally applicable to the international IT governance community.

ITEM FORMATS

The CGEIT exam consists of multiple-choice items. The multiple-choice item is the most commonly used type of test question in certification exams.

Multiple-choice items consist of a stem and four possible alternatives.

Item Stem:

The item stem contains the introductory statement to be completed or question to be answered. The stem often includes context describing a situation or circumstance related to the knowledge being assessed. Stems are usually written as direct questions, though sometimes stems are written as incomplete sentences to improve readability.

Item Choices (Alternatives):

The alternatives complete the introductory statement or answer the question and consist of one correct answer (key) and three incorrect answers (distractors).

Key:

The key must reflect current practice. In some cases, the key will be the only correct alternative, while in other cases the key will be deemed to be the BEST alternative when considered against the others provided.

Distractors:

Distractors are the incorrect alternatives. Writing effective distractors is one of the most challenging aspects of item writing. Distractors must be wrong answers, but they must appear to be plausible or possible answers to candidates who are not knowledgeable enough or do not have the applicable experience to choose the correct key.

As mentioned above, the majority of CGEIT exam items use a direct question format, as in the following example. (Please note that any items in this Guide will not appear on future exams.)

Stem: Which of the following should be included in an IT strategic plan?

Alternatives:

- A. Analysis of future business objectives (Key)
- B. Specifications for planned hardware purchases
- C. Target dates for development projects
- D. Annual budgetary targets for the IT department

Sometimes an incomplete statement is used in the stem, which looks like this:

Stem: IT governance helps to ensure that an organization aligns its IT strategy with:

Alternatives:

- A. enterprise objectives. (Key)
- B. IT objectives.
- C. audit objectives.
- D. control objectives.

Note that the responses for this item start with a lowercase letter and are followed by a period, as the responses serve to complete the sentence started in the stem.

ITEM TYPES TO AVOID

Items with the following issues will be returned to the item writer for revision by ISACA staff:

1. Items that ask a negatively phrased question – that is, asking which alternative does NOT apply, or which alternative is LEAST preferred. Negative questions require

candidates to reverse their traditional mode of thinking and tend to test poorly based on statistical analysis.

2. Items that ask a true/false question or ask which of the alternatives is a true statement.
3. Items with alternatives in a “multiple-multiple” format – that is, components of some alternatives are contained within others. It is permissible to use lists in answer choices, but no element contained in one choice should be repeated in any other choice.
4. Items with alternatives such as “all of the above”, “none of the above” or “Both B and C.” Each alternative must be able to stand alone. (Along these lines, alternatives such as “take no action” or “ignore this issue” are usually too close to “none of the above.” Such alternatives make poor distractors and should also be avoided.)
5. Items that use a fill-in-the-blank format.
6. Items that test knowledge of vendor-specific products or region-specific regulations.
7. Items that directly test knowledge of the meanings of terminology. Remember that the CGEIT exam is an experience-based exam – a definitional question can be answered by an otherwise inexperienced candidate who happens to have studied a review manual or other reference, and so such questions do not require candidates to rely on their professional experience to answer correctly.

STEPS TO WRITING ITEMS

- STEP 1 Select a topic from the CGEIT exam content outline (ECO) for your new item. Items should be written to test knowledge necessary to perform a specific task, and they should focus on a single topic area rather than trying to test multiple concepts at once.
- STEP 2 Write the item stem and key (correct answer). **When submitting items, you should always make choice A the correct answer.**
- STEP 3 Develop plausible distractors. Distractors should not include made-up words or phrases, and they should appear to be correct alternatives to an inexperienced professional. It may help when creating distractors to consider what an inexperienced IT governance professional might think the correct answer would be, or to ask colleagues what sorts of mistakes they can imagine an inexperienced professional making.
- STEP 4 In the space provided for rationales, include a thorough explanation of why the key is correct, as well as why each distractor is not a correct alternative. This helps ISACA reviewers and the Working Group understand your intended testing concept.
- STEP 5 Include any reference sources that support your item. Submitted items must include at least one reference, and the ISACA web site may be consulted for applicable references – <http://www.isaca.org/knowledge-center>.
- STEP 6 Review the item using the Item Writing Checklist at the end of this section.
- STEP 7 Have a peer or colleague review and critique the item.

GOOD PRACTICES FOR ITEM WRITING

1. Ensure the item is testing only one concept and reflects the chosen topic and supporting task statements. Items that attempt to test multiple concepts at once are typically returned for being unclear or potentially confusing.
2. Ensure the item is appropriate for a CGEIT candidate with five years of experience – not too fundamental or easy, not too advanced or difficult.
3. Ensure the stem and alternatives are concise and do not contain unnecessary detail or explanation. Keep in mind that a candidate has only a short time to read, understand and answer each question on the exam.

4. Ensure the item is not “teaching” the candidate – that is, explaining a concept explicitly within the stem or alternatives.
5. Ensure the key would always be the correct or best available answer for the situation presented in the stem. Items are often returned because they do not provide enough context for a candidate to arrive at the correct answer without making assumptions, or because the correct answer could vary depending on the organization or its circumstances.
6. If the item is testing roles and responsibilities, ensure the correct answer is not dependent on the organization’s size, structure or other organization-specific factors.
7. Ensure the wording of the item does not introduce subjectivity – words such as “commonly”, “frequently” or “rarely” are dependent on interpretation and should be avoided.
8. Ensure that absolute words such as “all”, “always” or “never” are not used – it is often too easy for candidates to rule out distractors with this wording.
9. Ensure that personal or gender pronouns (you, your, she, he, her, his, etc.) are avoided, as well as ad hoc organization names such as “Company XYZ”.
10. If an important word appears in both the stem and the key, that same word should appear in at least one distractor as well, so the candidate is not inadvertently given a clue to the correct answer.
11. Ensure the alternatives are compatible with the stem. For example, if the question begins with “Which of the following controls...,” all the alternatives should be controls.
12. Ensure any terminology or practice referred to in the item is globally familiar and in current use.
13. Ensure the alternatives do not introduce new information that is not apparent from the stem. Candidates should be able to begin formulating an answer even before viewing the alternatives.
14. Ensure all alternatives are roughly the same length and are constructed similarly. For example, if the key starts with a verb ending in “ing”, the distractors should also start that way. This keeps certain alternatives from standing out unnecessarily.

ITEM WRITING CHECKLIST

1. Does the item have any of the issues listed in the Item Types to Avoid section above? If so, those issues must be addressed prior to submission.
2. Does the item adhere to the item writing guidelines presented in the Good Practices for Item Writing section above?
3. Has the item been checked for grammar and spelling, and is it easily understood on first reading? Remember that the candidate does not get to see the rationales for the stem

and alternatives during the exam, so if one has to read the rationales to understand the item, the item probably needs clarification.

4. Have a topic and supporting task from the exam content outline (ECO) been selected for the item, and does the item's testing concept align with them?
5. Have rationales been included for the stem and alternatives?
6. Has at least one reference been provided for the item?

EXAMPLE ITEMS

Here are some examples of potential issues you may encounter when constructing items.

Example 1:

Stem: The **MAIN** reason for implementing performance measurements within an IT department is to:

Alternatives:

- A. verify whether IT strategic objectives have been achieved.
- B. determine the contribution of IT to the business.
- C. develop skills and competencies of IT human resources.
- D. determine the return on investment (ROI) of IT-related projects.

Key: A

The primary issue with this item is that the correct answer depends on the organization and its circumstances - any of the listed alternatives could be the main reason to implement performance measures. More context is needed in the stem to enable the candidate to choose one best answer without having to make assumptions. For example, the stem could be written as follows:

New Stem: Which of the following is the **MAIN** reason for a board to require the development of an IT performance measurement framework?

With the added references to the board and performance measurement frameworks, there is now enough specific context for the candidate to reasonably conclude that choice A is the best of the available answers.

Example 2:

Stem: Which of the following should be the **FIRST** activity in the risk assessment process?

Alternatives:

- A. Identify threats to the enterprise
- B. Review recent audit reports
- C. Evaluate current risk mitigation controls
- D. Assess the vulnerability of critical assets

Key: A

This item would be returned because both the question and alternatives are very operational and not testing at the governance level. Care must be taken to ensure that CGEIT items are written from a governance perspective. While a CGEIT professional should have knowledge of risk assessment methodology and the role of risk assessment as part of the risk management framework, the actions described in the item would not be executed at the governance level.

Example 3:

Stem: Which of the following is the **BEST** measurement to evaluate an IT help desk's benefit to the business?

Alternatives:

- A. Average time to resolve support tickets
- B. Total number of tickets raised
- C. Total number of support tickets resolved
- D. Average response time to support tickets

Key: A

In this item, the stem is addressing a governance-related concept, but the alternatives are still too low-level and operational in nature. This concept can be tested effectively with some revisions to the stem and choices to raise the item to the governance level, as follows:

New Stem: The **PRIMARY** governance objective for establishing and monitoring metrics related to IT help desk services is to:

New Alternatives:

- A. evaluate the IT help desk's alignment to business needs.
- B. assess IT help desk staff skills and competencies.
- C. evaluate user satisfaction with IT help desk support.
- D. determine required staffing levels for IT help desk support.

Key: A

When determining if an item is written at the operational vs. governance level, it may help to ask yourself if the task or related activity associated with the item would be executed at the governance (IT governance professional) level, or at a lower level within the enterprise.

If you need assistance or have questions related to the item writing process, please contact us at www.isaca.org/itemwriting.
